

Filtration made easy...

Mr Funnel filter is a heavy duty, fast flow, filter-in-a-funnel that separates damaging water and contaminants from gasoline, diesel, heating oil & kerosene.

Why Use It?

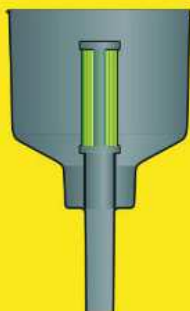

Dirt and water are practically unavoidable in stored fuel. These contaminants can plug filters, corrode components and cause engine shut down. You can combat these problems by refuelling with Mr Funnel every time you transfer fuel from one container to another.

FEATURES

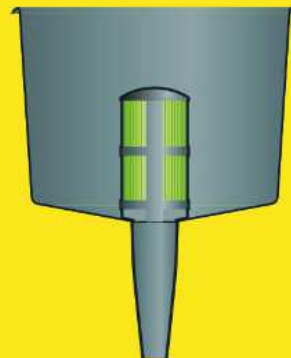

- Rugged Construction
- Teflon Coated Stainless Steel Filter
- Four Flow Rates
- Electro-Conductive Plastic Material
- Corrosion Resistant
